

Professor Evangelos Dialynas received the Diploma in electrical engineering in 1975 from NTUA and the M.Sc. and Ph.D. degrees from the University of Manchester Institute of Science and Technology, Manchester, U.K. (1976, 1979). He is presently a Professor in electric power systems at the School of Electrical and Computer Engineering and the Director of the Inter-Departmental Postgraduate Programme "Energy Production and Management" in NTUA. He has been the supervisor of more than ninety projects conducted by undergraduate, postgraduate and doctoral students. He has been the scientific coordinator and/or a senior researcher of many research and development projects in all the areas of electric power system design and operation. These projects have been conducted successfully while certain of them are under development. The European Commission as well as foreign and Greek organisations and private companies financed all these projects. As a result of his research activities, he has written four books, 2 dissertations, more than 80 papers being published in international technical journals after review and more than 120 papers presented in various international conferences and published in their proceedings. Additionally, he has also written more than 80 technical reports and other technical papers. His research interests are reliability modelling and evaluation, power system probabilistic assessment, power system operation, computer applications of power systems, microgrids, storage facilities and electric vehicles. Prof. E. Dialynas is a member of the Technical Chamber of Greece, a senior member of IEEE and a member of IET. He is also a Distinguished member of CIGRE and a member of the Administrative Council of CIGRE.
